NHTSA

Dear NHTSA,

The biggest single step we can take to cut global warming pollution and conserve oil is to require new cars to go farther on a gallon of gas. We're being squeezed by gas prices now. The National Highway Traffic Safety Administration (NHTSA) needs to Speed Up the timetable for making gas-saving cars. To help make this happen, NHTSA needs to base new fuel economy standards on realistic gas prices. With gas prices already topping \$4 a gallon, NHTSA is way off the mark in assuming gas will only cost \$2.45 per gallon in 2015.

Consumers are already demanding more fuel efficient cars and NHTSA should be raising the bar for the entire auto industry. I urge you to tell Detroit to speed up the implementation of stronger fuel economy standards using existing technology so that we can save money at the gas pump, curb global warming, and cut America's oil dependence.

Sincerely,

N/A Annie Laurie
